| Number of class hours: | 54 |
| Lectures | 24 |
| Seminar classes | 30 |
| Practical classes | - |
| Laboratory classes | - |
| Form of current assessment (credit/differential credit/exam) | exam |
| Number of credits | 3 |
| Competencies to be formed | To select the content, forms, methods and means of teaching and upbringing, to apply them in the educational process, taking into account the age and psychological characteristics of students |
| Summary of the content of the academic discipline: | |
| <p>The purpose of the discipline is to master students with a system of knowledge about the laws of the development of the human psyche in ontogenesis, conditions and factors of the development of mental processes and personality traits of a child at different age stages. Special attention is paid to the psychological features of the child's age-related development, upbringing and teaching him at different stages of ontogenesis. The issues of pedagogical psychology are considered taking into account the peculiarities of the specialty acquired by students and will contribute to the formation of a specialist's readiness to solve applied tasks in professional activity, develop the need for professional and personal growth and strengthen professional health.</p> | |
