Competencies to be formed	Mastering the academic discipline " Human life safety" should provide the formation of universal competencies: to apply basic methods of protection of population from negative factors of anthropogenic, man-made, natural origin, principles of rational nature management and energy conservation, ensure health and safe working conditions.
Summary of the content of the academic discipline:	
<p>The integrated academic discipline "Human life safety" includes the disciplines "Protection of population and objects from emergency situations", "Radiation safety", " Basics of ecology", "Basics of energy saving", "Occupational safety", which are obligatory for studying at the first level of higher education in the Republic of Belarus. This discipline aims at forming a culture of life safety for future professionals, based on the system of social norms, values and attitudes that ensure the preservation of their life, health and performance in constant interaction with the environment. As a result of studying this discipline, future specialists must obtain modern theoretical knowledge about different types of emergencies, modern means and ways to protect people and facilities from them, learn to solve problems in various emergency situations, learn the basics of ecology, energy conservation and labour protection and the legislation of the Republic of Belarus in these areas of life and be able to apply the knowledge and skills in their future professional activities.</p>
