Number of credits	3
Competencies to be formed	Knowledge of the theoretical and experimental research methodology in the sociology of management; the ability to adapt the results of modern sociological research to solve social problems arising in the activities of public and private enterprises, public, political, cultural organizations
Summary of the content of the academic discipline:	
<p>"Methodological problems of social forecasting" is an academic discipline, the purpose of which is to form students' systemic knowledge about the specifics of conducting diagnostic studies, taking into account various factors, and familiarization with modern models of social forecasting practice. In the discipline, students are taught the methods and techniques for conducting a specific socio-prognostic research, using humanitarian and socio-economic knowledge to solve practical problems; the application of theoretical knowledge to form ideas about social reality; skills in the selection, processing and analysis of data on social processes and social communities.</p>
