**Brief content of the academic discipline:**

The integrated training discipline «Safety of Living Activity» includes mandatory for the study at the first stage of higher education in the Republic of Belarus disciplines «Protection of population and facilities from emergency situations», «Radiation safety», «Basics of ecology», «Basics of energy saving», «Labour protection». This discipline aims to form a culture of life safety for future professionals, based on a system of social norms, values and attitudes that ensure the preservation of their life, health and performance in constant interaction with the environment. As a result of studying this discipline, future specialists must obtain modern theoretical knowledge about different types of emergencies, modern weapons and ways to protect people and facilities from them, learn to solve problems in various emergency situations, learn the basics of ecology, energy conservation and labor protection and the legislation of the Republic of Belarus in these areas of life and be able to apply the knowledge and skills in their future professional activities.
